Fire Works

These instructions are to be used as a guide to help you maintain your home or office in a safe and efficient manner. They do not replace the requirements of the manufacturer. You should ALWAYS review your owner’s manual for additional preventive maintenance requirements.

This inspection is designed to increase your personal safety and the safety of firefighters and first responders.

1. Conduct a risk assessment to determine you plan of action in the event that a fire starts. A risk assessment will help you find out all of the possible problems with the storage area, and your methods of storing. Then you can begin the process of making it a safe storage site.
2. Remove sources of ignition from the storage area. Store fireworks away from petroleum based substances like gasoline or kerosene, electric or gas heaters, drain cleaners and fertilizers.
3. Store fireworks in a closed container. Plastic tubs with lids are perfect for keeping fireworks dry.
4. Place fireworks away from other materials that could catch fire easily. It is important to keep them away from cardboard boxes, newspapers, pallets or parked vehicles.
5. Keep exits clear of fireworks. Store fireworks away from doorways, ensuring exits are open and accessible if a fire does start.
6. Test your smoke detector and make sure batteries are fresh and working.
7. Make sure your fire extinguisher works and keep it close to the area where you are storing fireworks. Check to see if the extinguisher is full and the expiration date has not passed.
8. Store fireworks in a secure room or building. You should be able to lock the building or room to prevent children or unwanted intruders from getting to the fireworks.

Take the time to do a thorough inspection. Ask if you have questions!
