### Garage Door Opener

*These instructions are to be used as a guide to help you maintain your home or office in a safe and efficient manner. They do not replace the requirements of the manufacturer. You should ALWAYS review your owner's manual for additional preventive maintenance requirements.*

This inspection is designed to increase your safety.

1. Inspect the hardware supporting the garage door opener by checking all nuts, bolts, screws and lag bolts to ensure they are tight and have not become loose over time.
  
2. Inspect the chain or drive screw for signs of sagging or wear. Make necessary adjustments if required.
  
3. Activate the garage door opener and listen for unusual noise or vibrations such as chain slipping, grinding etc. If a problem is detected, make the necessary repairs or contact a service professional.

Take the time to do a thorough inspection. Ask if you have questions!
