Outdoor Lighting

These instructions are to be used as a guide to help you maintain your home or office in a safe and efficient manner. They do not replace the requirements of the manufacturer. You should ALWAYS review your owner's manual for additional preventive maintenance requirements.

This inspection is designed to increase safety and security.

1. Turn on exterior lights and visually inspect each light for proper operation. Replace burnt out bulbs. If replacement bulbs do not correct the problem, make the necessary repairs or contact a professional to have repairs made.
2. Motion sensing lights must be checked at night.

Note:

Exterior or interior light fixtures that have electrical problems and do not operate correctly create an electrical shock risk and a fire risk to your facility. These lights should be repaired or disconnected to reduce the risks associated with water and electricity.

Take the time to do a thorough inspection. Ask if you have questions!
