Sump Pump

These instructions are to be used as a guide to help you maintain your home or office in a safe and efficient manner. They do not replace the requirements of the manufacturer. You should ALWAYS review your owner’s manual for additional preventive maintenance requirements.

This inspection is intended to check the proper operation of the sump pump. Often, sump pumps become inoperative and the status is undetected until it is too late. Refer to the owner's manual for proper maintenance and inspections that may be more detailed than the simple operational checks recommended here.

1. Inspect the pipes connected to the pump for signs of damage or leaks.
2. Activate the sump pump to ensure proper operation. In most cases, this function is performed by adding water to the sump area to insure the pump turns on and off as designed.

Note: if the pump does not function properly, consider making the necessary repairs or replacing the pump.

Take the time to do a thorough inspection. Ask if you have questions!
