Urinal

These instructions are to be used as a guide to help you maintain your home or office in a safe and efficient manner. They do not replace the requirements of the manufacturer. You should ALWAYS review your owner’s manual for additional preventive maintenance requirements.

This inspection is designed to detect problems or potential problems that when undetected could cause water damage to your facility.

1. Visually inspect the flush valve for signs of leaks.

2. Activate the flush valve and inspect for leaks. If leaks exist, contact a maintenance professional for repairs. Parts for urinals are generally purchased from a plumbing contractor.

3. Check drain for proper functioning. Also inspect wall area behind and under urinal for signs of leaks. If water is present or signs of water is present, contact a maintenance professional for repairs.

Note: Water is one of the most damaging agents known to facility professionals. Do not allow water leaks to persist. They are not sanitary, can lead to larger maintenance issues and become more costly to repair with age.

Take the time to do a thorough inspection. Ask if you have questions!
